

BJB26D

MANUAL JACKING BEAM

TECHNICAL SPECIFICATION

The Boston BJB26D is our mid-range model of slim line jacking beams. Built with strength and simple installation in mind, and with a closed height of just 180mm, it is ideal for working on vehicles with very low clearance.

Compact and lightweight, the BJB26D can easily be fitted to most lifts and inspection pits. A wide range of mounting arms are available and any specific / custom requirements can always be met. The beam is efficient and quick to operate, and uses a manual double-action pump to reduce lifting time. The adjustable top support beam can extend up to 1610mm covering most wide chassis vehicles and a separate extra-width kit is also available. For optimum safety, the beam employs a two-hand lowering system with dead man's release, an automatic safety locking device which engages during the raising of the beam and a hydraulic safety overload valve.

Main Features

- Innovative design and compact structure
- Low closed height of just 180mm
- Extendable top arm to 1610mm
- Unique adjustable support arms to fit lifts and pits
- Two hand lowering operation
- Double action pump reducing lifting time
- Automatic safety locking device
- Safety overload valve
- Supplied with three sets of height extensions (*)
- Supplied with protective rubber lifting cushions
